

SYSTEM AND METHOD FOR COMMUNICATING DATA
OVER A RADIO FREQUENCY VOICE CHANNEL

ABSTRACT OF THE DISCLOSURE

5 A system or method for communicating data over a voice channel
between a transmitter and a receiver. In one embodiment, the
system includes: (1) a silence detector, coupled to the
transmitter, that identifies a pause in voice traffic that is to be
transmitted over the voice channel and generates an interjection
signal during the pause and (2) a data injector, coupled to the
10 silence detector, that receives the interjection signal and
responds by causing the transmitter to transmit data to the
receiver over the voice channel.
